ASHUTOSH SAHOO

B.Tech CSE • Batch 2025–29

School of Computer Science and Engineering
IILM University, Greater Noida, U.P.

Roll No.: [25SCS1003004011]

2026–27

Candidate & Internship Overview

Candidate Details

Student Name: ASHUTOSH SAHOO

Roll Number: [25SCS1003004011]

Degree: B.Tech (Computer Science & Engineering)

Academic Batch: 2026–2027

University: IILM University, Greater Noida, U.P.

Internship Profile

Organization: CodeAlpha

Program: Frontend Development Internship

Core Technologies: HTML, CSS, JavaScript

Completed Projects: 2

Internship Period: 10 August 2026 – 10 September 2026

**Task-based practical
learning**

2 completed projects

GitHub + GitHub Pages

About CodeAlpha

Internship context and practical learning environment

Internship Context

CodeAlpha provided a mini, task-based frontend development internship.

The work focused on applying core web technologies through practical projects.

The internship emphasized building complete browser-based interfaces rather than isolated exercises.

Work Focus

Frontend interface development

Responsive layouts

JavaScript-based interaction

Basic project organization

Repository and static deployment workflow

Delivery Approach

Build the interface

Style and refine the layout

Add interaction with JavaScript

Test the result

Publish through GitHub Pages

Internship Context & Practical Challenge

The central learning challenge was to combine HTML, CSS and JavaScript into usable, responsive web interfaces.

Project 1

First-Calculator established core structure, styling and JavaScript interaction.

Project 2

Lumina-Image-gallery extended the work into filtering, navigation and richer visual interaction.

Internship Objectives

01 HTML Structure

Build clear browser-based page structures.

02 CSS & Responsiveness

Create clean layouts that adapt across screen sizes.

03 JavaScript Interaction

Implement functional user interactions.

04 Interactive UI

Build calculator and gallery interfaces.

05 GitHub Workflow

Organize and publish project repositories.

06 Static Deployment

Deploy completed projects using GitHub Pages.

Technologies & Tools

A deliberately simple stack focused on core frontend fundamentals.

HTML

Page structure and content

CSS

Styling, layout and responsiveness

JavaScript

Interaction and DOM-driven behaviour

Development & Hosting

GitHub

Public repository management and README documentation.

GitHub Pages

Static deployment for publicly accessible project websites.

Frontend System Architecture

Both projects follow a lightweight browser-based architecture with no backend or database layer.

Project-specific behaviour

Project 1 — First-Calculator

A responsive and minimalist calculator built with HTML, CSS and JavaScript.

GitHub: [ashu2sh-hub/First-Calculator](https://github.com/ashu2sh-hub/First-Calculator)

What was implemented

- Responsive calculator interface
- HTML structure and CSS styling
- JavaScript interaction and calculation behaviour
- Basic responsive frontend layout

Project Delivery

- Public GitHub repository • README.md • GitHub Pages deployment
- The main HTML file was renamed to index.html for GitHub Pages.

Live: ashu2sh-hub.github.io/First-Calculator/

Project 2 — Lumina-Image-gallery

A responsive minimalist image gallery showcasing curated photography.

Key Features

- Cars, Flowers and Landscapes categories
- Category filtering and navigation
- Enlarged / lightbox-style image viewing
- Previous / next image navigation
- Hover effects, smooth transitions and responsive behaviour

Project Delivery

Public GitHub repository • [index.html](#) • [style.css](#) • [script.js](#) • [README.md](#)
Published as a live static website using GitHub Pages.

[GitHub: ashu2sh-hub/Lumina-Image-gallery](https://github.com/ashu2sh-hub/Lumina-Image-gallery)

[Live: ashu2sh-hub.github.io/Lumina-Image-gallery/](https://ashu2sh-hub.github.io/Lumina-Image-gallery/)

Development Methodology & Progression

A practical workflow was repeated across both projects, with the second project introducing richer UI behaviour.

DEVELOPMENT PROGRESSION

Project 1 • First-Calculator

Core functionality → HTML/CSS structure → JavaScript interaction

Project 2 • Lumina-Image-gallery

Responsive visual presentation → filtering → navigation → image viewing

Skills Demonstrated & Learning Outcomes

HTML5

Page structure

CSS3

Layout & styling

Responsive Design

Screen-size adaptation

JavaScript

UI interaction

DOM Behaviour

Dynamic interface actions

Filtering & Navigation

Gallery interaction

GitHub

Repository management

GitHub Pages

Static deployment

Outcome The internship strengthened the ability to turn basic frontend concepts into small, complete and publicly accessible web projects.

Certification & Internship Verification

Official CodeAlpha Certificate of Completion

Certificate Details

Student: Ashutosh Sahoo

Student ID: CA/DF1/237853

Program: CodeAlpha Virtual Internship Program

Specialization: Frontend Development Internship

Period: 10 August 2026 – 10 September 2026

Issue Date: 11 September 2026

Project Verification

2 public GitHub repositories + live GitHub Pages websites

THANK YOU
